

**Delta
Hydronics**

Design, Build and Installation Services

Delta performs turnkey on-site design build projects specifically for the Aquatics Industry.

Our in house engineering and project support staff will determine heating and cooling loads for your life support systems under peak loading conditions and design a correctly sized boiler and chiller system for your aquatic application.

Delta will provide complete project services including engineering, mechanical equipment supply, plumbing materials and turnkey installation.

**Optimal
Temperature Means
Increased Production**

Centralized dual chiller/boiler plant providing heating & cooling to multiple aquatic tanks using immersion grid coil heat exchangers and preheating make-up water using a plate and frame heat exchanger. Individual tanks can be maintained at various set points.
